

Strategic Design Alignment Matrix

Translating Best-in-Class UX Patterns to the Recollection Wisconsin Redesign

Site	Why It's a Model (Andi's Notes)	Key Feature to Steal	Relevance to Sarah & Joseph	Relevance to Recollection WI	Wireframe Note
Canva 	Intent-Driven UI: Guides users by what they want to <i>do</i> .	"What will you...?" Hero Section: Icon-driven cards for role-based routing.	Sarah: Finds "Lesson Plans" instantly. Joseph: Finds "Partner Intake" without hunting.	Fixes the Homepage Bounce Rate by giving distinct audiences a "home" immediately.	Homepage: Replace the blank search bar with 3 large "Intent Cards": <i>Teach, Research, Contribute</i> .
WPLC 	Audience Delineation: Uses a "What brings you here?" prompt.	Role-Based Toggle: A navigation switch between "Librarian" and "Patron" views.	Sarah & Joseph: Both feel the site is "for them" because the language is tailored to their roles.	Directly addresses the need for a "Resource Library" for practitioners without cluttering public view.	Header: Implement a role-based toggle in the top-right utility nav to filter resource visibility.
National Archives 	Navigation Clarity: Uses category descriptions at the top.	Annotated Categories: Brief descriptions under top-level nav items.	Sarah: Understands what "Collections" contains (e.g., Photos, Audio) before clicking.	Helps users understand What RW Does at a glance without needing deep site knowledge.	Nav Menu: Use "Mega-menus" where hovering over nav items reveals a 1-sentence description of that section.
Digital Commonwealth 	Simplicity: Clean, open layout that isn't overwhelming.	"Browse by Topic" Grid: Simple icon row (e.g., Civil War, Sports, Maps) on the homepage.	Sarah: Allows for Discovery without the cognitive load of a perfect search query.	Aligns with Andi's feedback that it should be "pretty clear how to navigate to different spaces."	Homepage: Adopt a "Search + Topic Grid" layout with high white space to improve readability.

Hubspot 	Resource Library: Excellent structure for many technical resources.	Resource Hub Taxonomy: Filtering by "Topic" (e.g., Digitization) instead of "File Type."	Joseph: Can find "Metadata Guides" without knowing the specific file name or format.	Solves Information Overload for the evolving onboarding and practitioner materials.	Resource Page: Build a "Knowledge Base" layout with a sidebar for task-based categories.
MN Digital Library 	Metadata Discovery: Uses a high-level tagging system to bypass complex search.	Filter by Category & Topic Tags: Faceted sidebar with curated labels.	Sarah: Finds standards-aligned sets (e.g., "K-4 Social Studies") without "fuzzy" keyword failures.	Reduces reliance on the DPLA backend by providing human-curated entry points.	Search Page: Add a "Browse by Topic" sidebar with high-level tags for teachers.
APTrust	Easy Navigation: Simple top-bar navigation.	Minimalist Header: Clean, 4-5 item menu bar.	Sarah & Joseph: Simplifies the decision-making process when they first arrive.	Reduces Usability Friction by removing redundant or "cluttered" nav links.	Global Header: Streamline the primary menu to: <i>Search, About, For Educators, For Contributors.</i>
